Diversity in Birding Week 2022

Birding is a way to get outdoors, enjoy nature, and learn about the amazing natural world around you. Birding is fun and welcoming for all ages of all people at all experience levels (no matter your ability, race, and orientation). The first week of May is typically the peak migration week for birds making their way back from Central and South America to their North American summer homes. See the back of this page for events on learning more about our amazing birding world and how you can become involved in worldwide conservation efforts!
